

BREATHING AIR CHANGE-OVER REGULATOR

A regulator where the primary supply source is a breathing air compressor, and there is an emergency back-up supply from cylinders. With pressures up to 300 Bar. If the primary supply source fails or undergoes a significant drop in pressure the regulator will automatically start drawing gas from the cylinder supply. The standard model comes with primary supply, back-up supply and line pressure gauges. There is also a line pressure relief valve and an auxiliary port to which an alarm system can be fitted.

Part No
G0041

Description
Regulator Change-over Breathing Air
